Summary

Results-driven AI & Automation Engineer with hands-on experience building intelligent systems across machine learning, LLMs, computer vision, and NLP. Strong foundation in Python, with proven expertise in LLM fine-tuning, agentic workflow design, and end-to-end AI pipeline development. Former AI & Automation Engineer at DTS Solution (Dubai), delivering enterprise-grade automation solutions using Python frameworks, n8n, and LLM integrations. Adept at bridging research and production — from fine-tuning Wav2Vec2 for audio deepfake detection to building scalable concurrent systems in Go. Passionate about creating AI-powered products that solve real-world problems and drive measurable business impact.

Experience

AI & Automation Engineer, DTS Solution, Dubai Jul 2025 – Feb 2026

- Developed AI-driven automation systems and agentic workflows for business process optimization
- Built AI pipelines using Python-based frameworks and automation platforms such as n8n
- Designed intelligent workflows integrating APIs, data processing, and AI models for enterprise automation
- Worked on AI-powered solutions involving LLM integrations and automated decision-making systems

Technical Skills

AI & Data Science: Computer Vision, NLP, LLM Fine-Tuning, Custom Chatbot Development, Image Processing, Data Analysis & Visualization, Generative AI, Agentic Workflows

Programming Languages: Python, R, Go (Golang), C/C++, Java, JavaScript

Web & App Development: React, Next.js, FastAPI, HTML5, CSS

Databases & Tools: Vector Databases, DBMS, Git, GitHub, Jupyter Notebooks, n8n, VS Code, Claude Code

Soft Skills: Analytical Problem-Solving, Project Leadership, Attention to Detail, Proactive Learning, Team Collaboration

Education

National University of Technology (NUTECH), Islamabad – BS in Artificial Intelligence Oct 2023 – Present

Punjab Group of Colleges, Gujar Khan – HSSC Computer Science Jun 2020 – May 2022

Projects

DeepVoice Shield | React, FastAPI, ONNX, Wav2Vec2 [GitHub](#) [Live](#)

- AI-powered audio deepfake detection system; fine-tuned a Wav2Vec2 model for detecting synthetic vs real voice recordings
- Built React frontend integrated with a FastAPI + ONNX inference backend

AsphaltAI | YOLOv8, ONNX, Gradio, Python [GitHub](#) [HF](#)

- Road defect detection system trained on the Velotech Road Damage Detection dataset (11k images); achieved 0.581 mAP@50 (0.744 on potholes) using YOLOv8l
- Exported model to ONNX for framework-agnostic inference; saved on Hugging Face.

Email Triage Classifier | React, Flask, scikit-learn, Docker GitHub

- ML-powered email classification system categorising messages into spam, promotions, social, updates, and personal using a soft-voting ensemble (Logistic Regression + LinearSVC + Naive Bayes) with TF-IDF, trained on the Enron-Spam dataset
- Containerised full-stack app with React frontend, Flask REST API, and Nginx reverse proxy via Docker Compose

NeoZ | Next.js 16, React 19, Tailwind CSS 4, RSS GitHub Live

- Personalized news aggregation platform pulling from 40+ trusted RSS sources across 11 categories (Technology, AI, Science, Business, Sports, World, Pakistan, and more)
- Features full-text search, live local weather via Open-Meteo API, dark/light mode with system preference detection, and mobile-first responsive design

Pockit | Kotlin, Jetpack Compose GitHub

- Offline expense tracker app with a clean modern UI, local data storage, income & expense management, and recurring payment support
- Built financial analytics dashboard providing spending insights and summaries using Kotlin and Jetpack Compose

Go Web Crawler | Go (Golang) GitHub

- Concurrent web crawler built in Go that traverses web pages up to a specified depth with rate limiting and duplicate avoidance
- Demonstrates Go's concurrency model using goroutines, channels, sync.Map, and sync.WaitGroup

Go ChatApp | Go, WebSockets GitHub

- Lightweight real-time web chat application built using Go, Gorilla WebSocket, and standard HTML/CSS/JavaScript
- Efficiently handles concurrent WebSocket connections using Go's native concurrency support

N8N Crypto Analysis | n8n, Binance API, Google Gemini GitHub

- Automated cryptocurrency analysis workflow using n8n for data collection, processing, and generating trading insights with real-time market monitoring

Hotel Management System | Java, SQL, JDBC GitHub

- Comprehensive hotel management solution including booking system, room management, and customer database
